OVERVIEW

The idea behind the development of Vookar is to provide the fastest roadside assistance for the people who are stranded in the middle of a journey due to a vehicle's mechanical failure. Moreover, it can provide you with valets that can drive you home whenever in need. The vast networks allows this app to aid you with brilliant service without making you suffer even for a jiffy.

SOLUTIONS

Google Map Integration to provide nationwide assistance

Push Notifications

Model View Controller

Integration of PayPal (Payment Gateway)

Hiring Valets and Drivers

Management of Data of Valets and Drivers

Management of Data of Vehicles

Management of Data of Customers

Credits Purchase Mode

Insert Processed Data

CHALLENGES

Real Time Push Notifications

Sending Job request to appoint drivers

Payments Management

Setting pointers all over Singapore to accelerate the services

APPROACH

mySQL database to handle all website records and user data in its optimized tables

To handle abundant records, backgroud loading is used instead of on user screen loading to make it load faster, functions better and crashing is prevented.

TECHNOLOGY

CodeIgnitor, Swift
